

Dino Fejzulovic.

Useful software. A little imagination.

I'm a Software Engineer Co-op at **an aerospace company**, building enterprise solutions that thousands of people use every day.

fejzulovic231@gmail.com · dinof15.github.io · github.com/DinoF15

Experience.

CURRENT ROLE

Collins Aerospace

An RTX business

Present · Co-op

Software Engineer

Develop enterprise solutions that thousands of users operate daily, contributing to software that supports day-to-day work across the business.

Enterprise software Software engineering Business applications

Mohawk College

Energy and Power Innovation Centre

Feb 2023 – Mar 2025

Cloud Developer

Built AWS reporting and analytics platforms, including AI-assisted case summaries, fleet monitoring across thousands of elevators, and a factory intelligence system processing over one million data points each week.

AWS React IoT Cloud engineering

Mohawk College

IoT and Systems Laboratory

Sep 2022 – Jan 2023

Machine Learning Developer

Created predictive maintenance models for hydraulic elevators with scikit-learn and Azure ML, and evaluated vibration, temperature, and sound sensors.

Python scikit-learn Azure ML

Bartek Ingredients

Industrial technology

May 2022 – Sep 2022

Machine Learning Intern

Developed an Azure ML Studio proof of concept for anomaly detection using industrial sensor data, exploring how machine learning could support equipment maintenance.

Azure ML Studio Anomaly detection Sensor data

Bartek Ingredients

IT operations

Sep 2021 – Jan 2022

IT Analyst

Developed and deployed a Power Apps application for rotational factory equipment inspections, with barcode workflows and real-time inspection logs.

Selected work.

Full stack / Applied AI

CaseSummaries

A serverless reporting dashboard that centralizes institutional case data and uses Claude through AWS Bedrock to generate summaries and stakeholder reports.

React TypeScript AWS Bedrock

Responsible AI / Data science

Credit approval fairness audit

A model-governance audit of an automated credit approval system, testing whether postal codes act as a proxy for socioeconomic status through disparate impact ratios, matched-profile comparisons, and a new Postal Code Bias Severity Index.

Python Pandas Plotly

Cloud / Industrial IoT

Connected manufacturing

RFID tracking, stacklight monitoring, and digital work orders in a real-time factory intelligence platform processing over one million data points each week.

React AWS IoT Cloud

Cloud / Infrastructure as code

Diogenes

A Next.js app where an AI named Diogenes invents tongue-in-cheek context for famous quotes. Built to learn Azure coming from AWS, with the registry, PostgreSQL, and web app provisioned by Terraform and deployed through GitHub Actions.

Next.js Terraform Azure OpenAI

Machine learning / Research

Hydraulic lift analysis

Exploring equipment behavior with Isolation Forest and K-means models to detect anomalies and support predictive maintenance for hydraulic elevators.

Python Isolation Forest K-means

The toolkit.
